

Project Design Phase

Proposed Solution

Field	Details
Team Lead	Govindu Kavya Sri
Team Members	Eswari Gayatri Budumuru, Kiladi Kalavathi, Adaka Mounika, Panditi Jyostna
Domain	Retail / Cosmetics Analytics
Tools Used	Python, Microsoft Excel, Tableau Public
Dataset	Cosmetics product dataset — 1,472 records, 11 attributes
Published Dashboard	public.tableau.com/app/profile/govindu.kavya.sri/viz/cosmeticproject_17872016666220/Dashboard1

Project Context

The cosmetics industry is one of the fastest-growing and highly competitive sectors, driven by changing consumer preferences, diverse skin types, brand innovation, and evolving pricing strategies. With increasing demand for personalized beauty products, companies rely on data-driven insights to understand market trends, consumer behavior, and product performance.

This project, “Cosmetic Insights: Navigating Cosmetics Trends and Consumer Behavior with Tableau,” focuses on analyzing a cosmetics dataset to uncover meaningful patterns and actionable insights. The dataset includes key attributes such as brand, product category, price, rank, and skin type suitability (Dry, Oily, Combination, Normal, and Sensitive).

This project is designed to help businesses and analysts understand cosmetics market trends and consumer preferences. By analyzing brand performance, pricing patterns, product distribution, and skin-type coverage, the dashboard enables stakeholders to identify high-performing products, target specific customer segments, and optimize marketing and product strategies.

Scenario 1: Monitoring Consumer Preferences

In a real-time scenario, imagine receiving an alert indicating a concerning trend in consumer preferences, such as a significant decline in interest in certain cosmetic products or ingredients. Using the Cosmetic Insights data, we can promptly assess the extent and potential impact of this trend, identify contributing factors, and deploy immediate interventions to adapt product offerings and marketing strategies. Whether it's through targeted promotional campaigns, adjustments in product formulations, or personalized

recommendations, real-time analysis enables agile decision-making and proactive measures to meet evolving consumer needs.

Scenario 2: Addressing Product Concerns

In the event of identifying widespread product concerns, such as negative reviews or safety issues associated with specific cosmetic items, real-time access to Cosmetic Insights data enables swift response and management. Cosmetic companies and regulatory bodies can utilize the dataset to gather crucial information about the concerns, including their prevalence, potential impacts on consumer trust, and affected product demographics. By leveraging real-time analytics, they can implement quality control measures, recall products if necessary, and communicate transparently with consumers to address their concerns and maintain brand integrity.

Scenario 3: Predictive Analysis and Product Innovation

Leveraging predictive analytics capabilities, Cosmetic Insights empowers companies to anticipate and respond to emerging trends and consumer preferences in the beauty industry. By analyzing historical data and identifying predictive indicators, companies can proactively innovate new products, adjust existing formulations, and tailor marketing strategies to meet evolving consumer demands. Real-time monitoring of market trends, consumer feedback, and competitor activities enables timely interventions, product innovation, and strategic decision-making to stay ahead in a competitive market landscape.

Proposed Solution

Parameter	Description
Problem Statement	Consumers, retail category managers, and brand analysts lack a unified, interactive visual analytics tool to explore cosmetics product data by category, brand, price, rating, and skin-type suitability, leading to inefficient purchasing decisions, suboptimal retail assortment, and limited competitive visibility.
Idea / Solution Description	An interactive Tableau-based BI dashboard that transforms a cleaned cosmetics product dataset (1,472 records, 6 categories, 116 brands) into four visualizations combined into a single cross-filterable dashboard with a searchable brand filter, published on Tableau Public for free browser access.
Novelty / Uniqueness	A price-to-rating scatter view that directly tests the common assumption that higher price means better quality; a skin-type suitability heatmap not typically found in retail dashboards; cross-chart filter actions that let any single click re-frame all four views at once.
Social Impact / Customer Satisfaction	Consumers gain evidence-based purchasing confidence, reducing wasted spend on unsuitable products. Retail buyers gain visibility into pricing and rating patterns for assortment planning. Brand analysts gain a consolidated competitive benchmark. Free deployment removes cost barriers for all three.
Business Model	Team academic/internship project delivered as a public Tableau dashboard; future potential includes a subscription analytics view for cosmetics retailers or a brand-side competitive intelligence offering.
Scalability	New products, brands, or a larger retailer catalog can be appended to the source data and the workbook refreshed; additional fields (e.g., ingredient-

Parameter	Description
	level or review-text analysis) can be added as calculated fields without redesigning the dashboard architecture.
