

Ideation Phase

Brainstorm & Idea Prioritization

Field	Details
Team Lead	Govindu Kavya Sri
Team Members	Eswari Gayatri Budumuru, Kiladi Kalavathi, Adaka Mounika, Panditi Jyostna
Domain	Retail / Cosmetics Analytics
Tools Used	Python, Microsoft Excel, Tableau Public
Dataset	Cosmetics product dataset — 1,472 records, 11 attributes
Published Dashboard	public.tableau.com/app/profile/govindu.kavya.sri/viz/cosmeticproject_17872016666220/Dashboard1

Project Context

The cosmetics industry is one of the fastest-growing and highly competitive sectors, driven by changing consumer preferences, diverse skin types, brand innovation, and evolving pricing strategies. With increasing demand for personalized beauty products, companies rely on data-driven insights to understand market trends, consumer behavior, and product performance.

This project, “Cosmetic Insights: Navigating Cosmetics Trends and Consumer Behavior with Tableau,” focuses on analyzing a cosmetics dataset to uncover meaningful patterns and actionable insights. The dataset includes key attributes such as brand, product category, price, rank, and skin type suitability (Dry, Oily, Combination, Normal, and Sensitive).

This project is designed to help businesses and analysts understand cosmetics market trends and consumer preferences. By analyzing brand performance, pricing patterns, product distribution, and skin-type coverage, the dashboard enables stakeholders to identify high-performing products, target specific customer segments, and optimize marketing and product strategies.

Scenario 1: Monitoring Consumer Preferences

In a real-time scenario, imagine receiving an alert indicating a concerning trend in consumer preferences, such as a significant decline in interest in certain cosmetic products or ingredients. Using the Cosmetic Insights data, we can promptly assess the extent and potential impact of this trend, identify contributing factors, and deploy immediate interventions to adapt product offerings and marketing strategies. Whether it's through targeted promotional campaigns, adjustments in product formulations, or personalized

recommendations, real-time analysis enables agile decision-making and proactive measures to meet evolving consumer needs.

Scenario 2: Addressing Product Concerns

In the event of identifying widespread product concerns, such as negative reviews or safety issues associated with specific cosmetic items, real-time access to Cosmetic Insights data enables swift response and management. Cosmetic companies and regulatory bodies can utilize the dataset to gather crucial information about the concerns, including their prevalence, potential impacts on consumer trust, and affected product demographics. By leveraging real-time analytics, they can implement quality control measures, recall products if necessary, and communicate transparently with consumers to address their concerns and maintain brand integrity.

Scenario 3: Predictive Analysis and Product Innovation

Leveraging predictive analytics capabilities, Cosmetic Insights empowers companies to anticipate and respond to emerging trends and consumer preferences in the beauty industry. By analyzing historical data and identifying predictive indicators, companies can proactively innovate new products, adjust existing formulations, and tailor marketing strategies to meet evolving consumer demands. Real-time monitoring of market trends, consumer feedback, and competitor activities enables timely interventions, product innovation, and strategic decision-making to stay ahead in a competitive market landscape.

Step 1 — Team Gathering, Collaboration and Select the Problem Statement

The three user personas (Priya, Meera, Arjun) were reviewed, and the core unmet need identified across all three was the absence of a unified, visual, interactive tool for exploring cosmetics product data. Selected problem: “How can we help consumers, retailers, and brand analysts compare cosmetics products by price, rating, brand, and skin-type suitability using historical product data?”

Step 2 — Brainstorm, Idea Listing and Grouping

- Compare average price across product categories (Moisturizer, Cleanser, Face Mask, Treatment, Eye Cream, Sun Protect)
- Plot price against customer rating to see whether higher price correlates with better ratings
- Rank brands by average rating within each category to surface top performers
- Visualize which skin types (Combination, Dry, Normal, Oily, Sensitive) are best served by each product category
- Allow users to filter the entire view by brand
- Combine all views into a single, cross-filterable dashboard rather than separate static reports
- Publish to Tableau Public for free, browser-accessible sharing

Step 3 — Idea Prioritization

Idea	Impact	Feasibility	Priority
Avg Price by Category chart	High	High	1
Price vs Rating scatter chart	High	High	2
Top Brands by Category chart	High	High	3
Skin Type Coverage heatmap	Medium	High	4
Cross-chart filter actions	High	Medium	5
Searchable Brand filter control	Medium	High	6
Single combined interactive dashboard	High	High	7
Publish to Tableau Public	High	High	8
